Barcelona, Spain

EDUCATION

Multimedia Degree
Universitat Oberta de Catalunya (UOC)
Interactive Aplication development speciality.

ABOUT ME

I'm currently based in Barcelona, and during my professional carreer I have worked with a wide range of both frontend and backend technologies, such as Python, Django, Rust, Javascript or React.

I enjoy the development world where there's always room to grow and explore new things. I like team environments where I get to both learn from my colleagues and help them with my expertise.

SKILLS

Technical

- Python & Django
- Javascript & React
- Rust
- HTML
- CSS, Tailwind
- Bootstrap, Bulma

Tools

- Git, Github & Mercurial
- Github Actions
- Docker
- SQL & Redis
- Sass, Stylus & Scss

Languages

- 100 **Spanish, Catalan** Native
- 90 **English** Fluent
- 25 **German** Basic level

EXPERIENCE

2024 – 2025
Rust and React developer
Planck Security

I was in charge of developing the Security Hub, migrating our previous Python CLI tool to a **Rust** solution.
This project combined several **Docker** services that interacted through **APIs** to decrypt, scan, and store encrypted email through a Postfix mail filter.
All the settings and initial configuration could be managed from the browser through a **React** frontend.

2018 – 2024
Web and Python developer
pEp Security → Planck Security

I joined the company as a frontend developer in charge of the website. My task was migrating a static HTML system to Mezzanine, a **Django** CMS. The website ended including a custom payment and invoicing system.
I also created a **Python** CLI toolchain that worked with the company's decryption backend.
I created a decryption demo solution for our presentations, combining an **MQ system** for the messages and a **Django** frontend.
I took a main role in the development of a CLI tool and a **Docker** solution to decrypt email traffic.

2014 – 2018
Full Stack developer
Ancora Dual

I worked as a web designer and developer. We created a customizable CRUD business solution, based on **Django** and **Backbone**.
I took a main role on developing Autopractick, a web-based management tool for driving schools, with a **Phonegap** partner app.
I also enforced agile methodologies to our team workflow.

Let's work together.
